Hello Darragh,

Thank you for reaching out to us!

You are able to use the API. The new PurpleAir API can be viewed [here](#). We will be switching over to this API and I will put you on the list to receive keys for this API. Until then feel free to check it out to get ready to use that.

Be sure to let us know if you have any additional questions, and enjoy the rest of your week!

Kind Regards,
Amanda

Hi there,

Just following up on this - is it okay for me to continue building an app which makes use of your data?

Best regards,

Darragh

You received a new message from your online store's contact form.

Name:

Darragh Rogan

Email:darraghrogan@kissengineering.ie**Phone:**

00353868616425

Topic:

Other

Mac:**Body:**

Hi there,

I am building an app at present to display pertinent sensor details in users' Mac menubar at a glance, using your graciously provided JSON data feed.

The app is open source, on GitHub (see <http://miasma.kissengineering.ie>) and I hope to put it on the Mac App Store for wider distribution.

Can you advise, do you have any issue with me doing this?

As Apple are rejecting apps at present from their App Store if developers do not source confirmation from data providers that they are comfortable with their names / data feeds being used (for example, see this recent

article about a developer who uses Tesla data
getting their app rejected:
<https://9to5mac.com/2020/08/27/apple-rejects-watch-for-tesla-app-as-it-starts-requiring-written-consent-for-third-party-api-use/>)

Best regards, and looking forward to your
response,

Darragh Rogan
